

## THE SHAPE OF THE TALLEST COLUMN: CORRECTED\*

STEVEN J. COX<sup>†</sup> AND C. MAEVE MCCARTHY<sup>‡</sup>

**Abstract.** Our summary of the work of Keller and Niordson (*J. Math. Mech.* 16, pp. 433–446, 1966) was inaccurate. We offer a correction.

**Key words.** isolated eigenvalue, continuous spectrum

**AMS subject classifications.** 35L15, 49J99, 73H05

**PII.** S0036141099354958

Our criticism [1] of the work of Keller and Niordson [2] was not accurate. Following Proposition 2.1 on page 549 of [1] we stated that “Keller and Niordson’s calculation of  $c = \lambda_1/24$  suggests that their design gives rise to an isolated eigenvalue,  $\lambda_1 = 24c$ , just below the continuous spectrum.” We followed this statement with the misrepresentation “Their result, however, was predicated on the false assumption that (2.4) possessed a purely discrete spectrum.” We wish to replace this statement with “Their result, however, assumed the existence, that cannot be taken for granted, of such an isolated eigenvalue for  $a$  in a neighborhood of the optimal design.” We regret the misrepresentation.
