

**CSC 325**  
**Fall 2014**

**Programming Assignment #3**  
**Due Date: 9/23/14**

You are to design and implement a GUI application that will calculate the price of a pizza, based upon the size, style of crust, and selection of toppings. The price is calculated according to the following rules:

- A plain small pizza is \$6, medium is \$8, large is \$10, and a party-size is \$12.
- Thick crust is \$1.00 more than thin crust, regardless of size.
- Additional toppings are \$0.75, \$1.25, \$1.75, and \$2.25 each for small, medium, large, and party-size pizzas, respectively.

I recommend using radio buttons for the choice of size and crust, and check boxes for the selection of toppings. There should be at least six different toppings available.

Turn in a printed copy of your source code and a screen shot of your application executing.
