College Algebra — Joysheet 5 MAT 140, Spring 2025 — D. Ivanšić

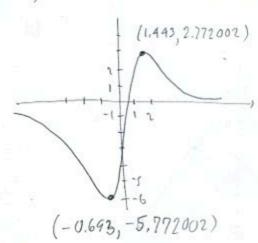

Name: Saul Ocean

Covers: 2.1, 2.2, 2.3 Show all your work!

(10pts) Use your calculator to accurately sketch the graph of the function

(When entering function into calculator, don't forget to put parentheses around numerator and denominator if the calculator doesn't have fractional notation.) Draw the graph here, indicate units on the axes, and solve the problems below with accuracy 6 decimal points.

- a) Find the local maxima and minima for this function.
- b) State the intervals where the function is increasing and where it is decreasing.

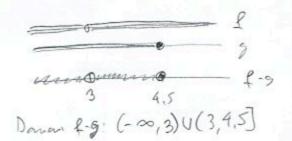

- a) local um is 5,772002 = & (-0,693) local week i) 2.772002 = \$ (-1.443)
- b) lucreasing on (-0,693, 1,443) Decreesing on (-00, -0.693), (1,443, 2.772002)

2. (20pts) Let
$$f(x) = \frac{x^2}{x - 3}$$
, $g(x) = \sqrt{9 - 2x}$. Find the following (simplify where possible): $(f + g)(-8) = \int (g) + g(-8) = \frac{(-8)^5}{-8-3} + \sqrt{9 - 2(-8)}$ $(fg)(-3) = \int (-5) g(-3) = \frac{(-3)^5}{-3-3} \cdot \sqrt{9 - 2(-3)}$ $= \frac{64}{11} + \sqrt{25} = \frac{-64 + 55}{11} = -\frac{9}{11}$ $= \frac{3}{2} \cdot \sqrt{15} = -\frac{3\sqrt{15}}{2}$ $= \frac{3\sqrt{15}}{2} \cdot \sqrt{9 - 2x} = \frac{x^5}{x - 3} \cdot \frac{1}{\sqrt{9 - 2x}} = \frac{x^5}{x - 3} \cdot \frac{1}{\sqrt{9 - 2x}}$ $= \int (g \circ f)(1) = \int (g(1))^2 g(\frac{1}{1 - 3})^2 = g(-\frac{1}{2})$ $= \int (-\frac{1}{2})^2 e^{-\frac{1}{2}} e^{-\frac{1}{2}} e^{-\frac{1}{2}} e^{-\frac{1}{2}} e^{-\frac{1}{2}}$

$$(f \circ g)(x) = f(g(x)) = f(\sqrt{9-2x}) = \frac{\sqrt{9-2x^2}}{\sqrt{9-2x}-3} = \frac{9-2x}{\sqrt{9-2x}-3}$$

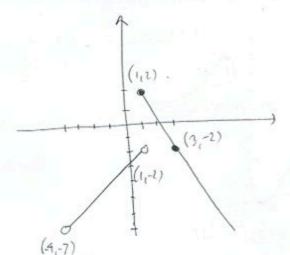

The domain of (f - g)(x) in interval notation

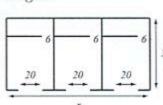

3. (8pts) Consider the function $h(x) = \sqrt[7]{x^2 - 5}$ and find two different solutions to the following problem: find functions f and g so that h(x) = f(g(x)), where neither f nor g are the identity function.

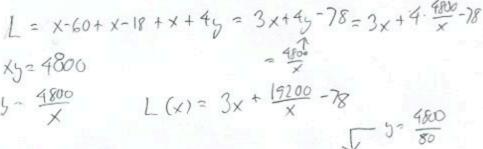

(8pts) Sketch the graph of the piecewise-defined function:

$$f(x) = \begin{cases} x - 3, & \text{if } -4 < x < 1 \\ 4 - 2x & \text{if } x \ge 1. \end{cases}$$

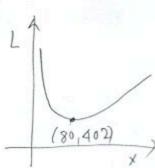

- (14pts) A real estate investor is building a 3-store shopping center with total area 4800 square feet in which every store has a 20-ft door and shopwindow and a 6-ft door to the back area. The investor wishes to minimize the construction cost, which is same as minimizing the total length of the walls.
- a) Express the total length of the walls as a function of the length of one of the sides x. What is the domain of this function?
- b) Graph the function in order to find the minimum. What are the dimensions of the shopping center for which the total length of the walls is minimal? What is the minimal wall length?

Danas: Must have X > 60 Darain [60,00)

Dimensions: 80 x 60 ft Minmal wall length: 402 ft
