

1. (12pts) Use the unit circle to estimate the values of the trigonometric functions of the angles drawn.

$$\cos \psi = -0.53$$

$$\cot \psi = 0.65 \quad (\text{or } \frac{-0.53}{-0.85})$$

$$\sin \phi = 0.3$$

$$\tan \phi = -0.32 \quad (\text{or } \frac{0.3}{0.92})$$

$$\cos \theta = 0.2$$

$$\csc \theta = \frac{1}{\sin \theta} = \frac{1}{0.96} = 1.04$$

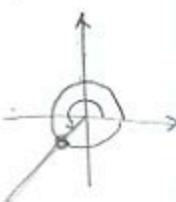

2. (18pts) For each of the following, draw the unit circle and the appropriate angle in order to infer from the picture the exact values of the trigonometric functions.

$$\cos 225^\circ = -\frac{\sqrt{2}}{2}$$

$|180^\circ + 45^\circ|$

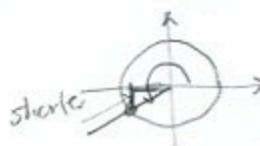

$$\sin \frac{7\pi}{6} = -\frac{1}{2}$$

$$\sec(-90^\circ) = \frac{1}{\cos(-90^\circ)} = \frac{1}{0}$$

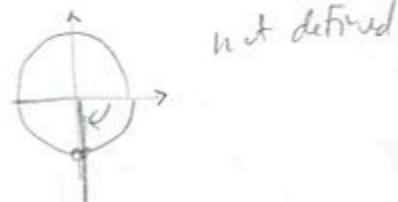

$$\tan(-210^\circ) = -\frac{1}{\sqrt{3}}$$

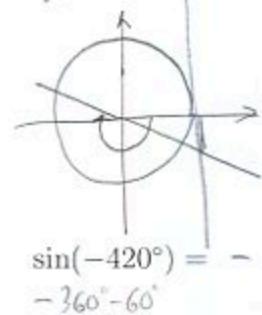

$-180^\circ - 30^\circ$

$$\csc \frac{5\pi}{3} = \frac{1}{\sin \frac{5\pi}{3}} = -\frac{1}{\frac{\sqrt{3}}{2}} = -\frac{2}{\sqrt{3}}$$

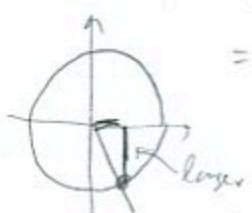

$$\cot(5\pi) = \frac{1}{\tan 5\pi} = \frac{1}{0}$$

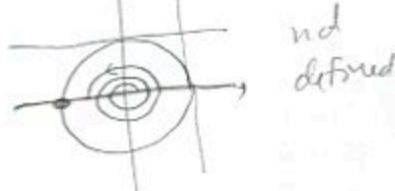

$$\sin(-420^\circ) = -\frac{\sqrt{3}}{2}$$

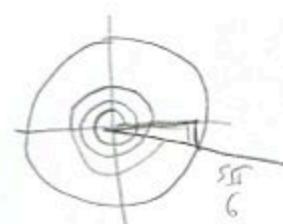

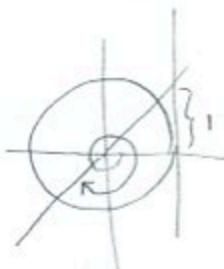

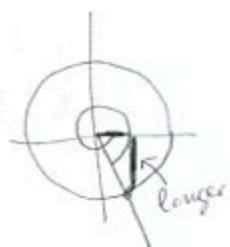

$-360^\circ - 60^\circ$

$$\tan\left(-\frac{11\pi}{4}\right) = 1$$

$$\cos \frac{35\pi}{6} = \cos\left(\frac{5\pi}{6}\right) = -\frac{\sqrt{3}}{2}$$

3. (8pts) Draw two periods of the graph of $y = 3 \cos(2x)$.

What is the amplitude? The period?

For each period, indicate x-coordinates of the five special points (middle, peaks, valleys).

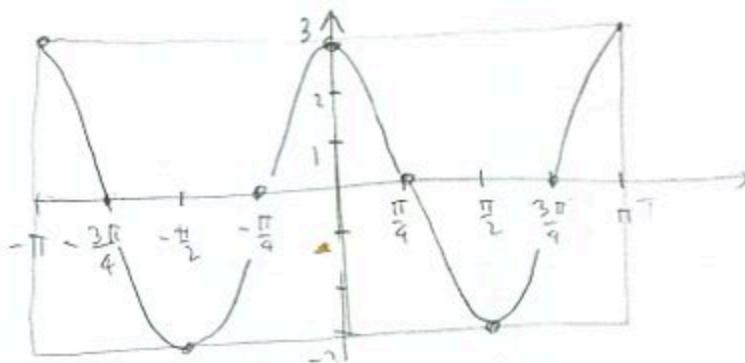

Amplitude: 3

$$\text{period} = \frac{2\pi}{2} = \pi$$

$$-\frac{C}{B} = 0$$

$$-\frac{C}{B} + \frac{2\pi}{B} = \pi$$

$$\text{ticks every } \frac{\pi}{4}$$

Graphs $\curvearrowleft \rightarrow \curvearrowright$

4. (11pts) Draw two periods of the graph of $y = -2 \sin\left(3x + \frac{\pi}{4}\right)$.

What is the amplitude? The period?

For each period, indicate x-coordinates of the five special points (middle, peaks, valleys).

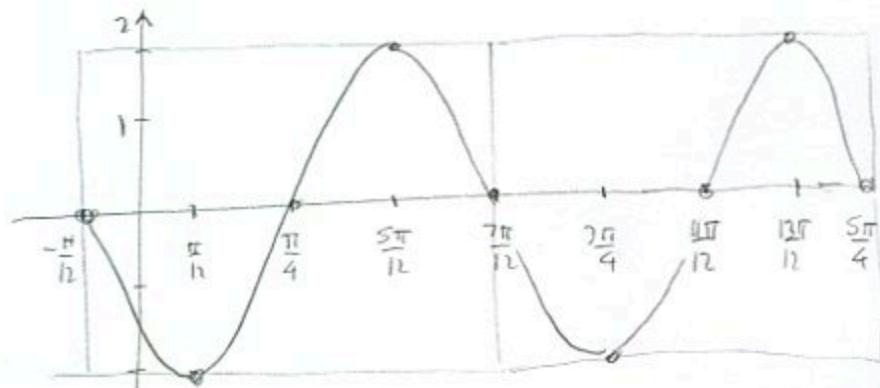

Amplitude = 2

$$\text{Period} = \frac{2\pi}{3}$$

$$-\frac{C}{B} = -\frac{\frac{\pi}{4}}{3} = -\frac{\pi}{12}$$

$$-\frac{C}{B} + \frac{2\pi}{B} = -\frac{\pi}{12} + \frac{2\pi}{3} = \frac{-1+8}{12} \pi = \frac{7\pi}{12}$$

$$\text{ticks every } \frac{2\pi}{3} = \frac{2\pi}{12} = \frac{\pi}{6}$$

5. (11pts) Draw two periods of the graph of $y = 2 \sin\left(-4x + \frac{\pi}{2}\right) - 1$.

What is the amplitude? The period? *between -2 and 2* *down*

For each period, indicate x-coordinates of the five special points (middle, peaks, valleys).

Amplitude = 2

$$\text{Period} = \frac{2\pi}{|-4|} = \frac{\pi}{2}$$

$$-\frac{C}{B} = -\frac{\frac{\pi}{2}}{-4} = \frac{\pi}{8}$$

$$-\frac{C}{B} + \frac{2\pi}{B} = \frac{\pi}{8} - \frac{\pi}{2} = -\frac{3\pi}{8}$$

$$\text{ticks every } \frac{\pi}{2} = \frac{\pi}{8}$$
